

SAS Macro: Beyond the Basics

VINCE DELGOBBO, SAS

DSUG

Copyright © SAS Institute Inc. All rights reserved.

Agenda

- The basics
- Macro with a parameter
- Iterative macro processing
- Conditional macro processing
- Macro timing and resolution
- Interfacing macro and DATA step
- Introduction to macro quoting

The Basics

3

Macro Language Basics

- Good replacement for common/repetitive tasks
- Macro **variables** and **macros**
- Can create global variables used anywhere
- Can create variables available only within a macro
- Macro: collection of macro and SAS statements
- String-based language – produces text
- Macro "triggers": & and %
 - **&VARIABLE-NAME** resolves a macro variable into text string
 - **%MACRO-NAME** executes a macro
- Macro processing happens before anything else
- Need double quotes ("") if used within quotes

4

Macro Language Basics – Examples

■ Open code

```
%let CITY=Denver;  
* Lots of SAS code here;  
title1 "Report for &CITY";  
proc print ... ; run; quit;
```

CITY is a **global** macro variable

Need double quotes to resolve

■ Convert to a macro

```
%macro do_something(CITY=);  
* Lots of SAS code here;  
title1 "Report for &CITY";  
proc print ... ; run; quit;  
%mend do_something;  
  
%DO_SOMETHING(city=Denver)
```

CITY is a **local** macro variable

5

Macro with a Parameter

6

Macro with a Parameter

```
%macro claiminfo(YEAR=);

title1 "Report for &YEAR";
proc print data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

title1 "Summary for &YEAR";
proc means data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

%mend claiminfo;
```

7

Macro with a Parameter

```
%macro claiminfo(YEAR=);
YEAR is a local macro variable

title1 "Report for &YEAR";
Need double quotes to resolve

proc print data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
SVC_Year is a character variable

run; quit;

title1 "Summary for &YEAR";
proc means data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

%mend claiminfo;
```

8

Macro with a Parameter

```
%macro claiminfo(YEAR=); YEAR is 2005

  title1 "Report for &YEAR";
  proc print data=health.claims_sample;
    var ... ;
    where (SVC_Year eq "&YEAR");
  run; quit;

  title1 "Summary for &YEAR";
  proc means data=health.claims_sample;
    var ... ;
    where (SVC_Year eq "&YEAR");
  run; quit;

%mend claiminfo;

options mprint;

%CLAIMINFO(year=2005)
```

9

Log for a Single Year

```
MPRINT(CLAIMINFO): title1 "Report for 2005";
MPRINT(CLAIMINFO): proc print data=health.claims_sample;
MPRINT(CLAIMINFO): var ... ;
MPRINT(CLAIMINFO): where (SVC_Year eq '2005');
MPRINT(CLAIMINFO): run;

NOTE: There were 337 observations read from the data set
      HEALTH.CLAIMS_SAMPLE.
      WHERE SVC_Year='2005';

MPRINT(CLAIMINFO): title1 "Summary for 2005";
MPRINT(CLAIMINFO): proc means data=health.claims_sample;
MPRINT(CLAIMINFO): var ... ;
MPRINT(CLAIMINFO): where (SVC_Year eq '2005');
MPRINT(CLAIMINFO): run;

NOTE: There were 337 observations read from the data set
      HEALTH.CLAIMS_SAMPLE.
      WHERE SVC_Year='2005';
```

10

Output for a Single Year

Report for 2005

Obs	ProviderID	MemberID	CHGAMT	LNDISCAMT	EERESP	PaidAmt
9	303-60-2456	012-01-8821	110.00	16.50	93.50	0.00
18	770-03-1665	012-54-4665	11.11	0.00	0.00	11.11
21	380-04-3952	012-56-7160	95.00	14.25	12.11	68.64
26	325-32-3393	013-64-4285	44.35	4.44	5.99	33.92
29	406-51-3042	020-30-5678	65.00	0.00	0.00	65.00

Summary for 2005

The MEANS Procedure

Variable	Label	N	Mean	Std Dev	Minimum	Maximum
CHGAMT	Charged Amount	337	133.8451335	288.5492179	-188.0000000	2451.25
LNDISCAMT	Line Item Discount Amount	337	20.0098220	65.4137756	-46.3500000	593.2500000
EERESP	Employee Responsibility	337	29.5309792	142.9098598	-188.0000000	2451.25
PaidAmt	Paid Amount	337	81.6817507	185.1763225	-97.3400000	1779.75

11

Iterative Macro Processing

12

"Poor Man's" Iterative Processing

```
%macro claiminfo(YEAR=) ;  
...  
%mend claiminfo;  
  
%CLAIMINFO(year=2005)  
%CLAIMINFO(year=2006)  
%CLAIMINFO(year=2007)  
...
```

What's the problem with this approach?

13

Iterative %DO – General Syntax

```
%macro mymacro;  
  
%do macro-variable = start %to end <%by increment> ;  
    /* Text and macro language statements here;  
%end;  
  
%mend mymacro;
```

- NOT valid outside of a macro ("open code")
- Note use of % in macro statements

14

Start with Macro with a Parameter

```
%macro claiminfo(YEAR=);

    title1 "Report for &YEAR";
    proc print data=health.claims_sample;
        var ... ;
        where (SVC_Year eq "&YEAR");
    run; quit;

    title1 "Summary for &YEAR";
    proc means data=health.claims_sample;
        var ... ;
        where (SVC_Year eq "&YEAR");
    run; quit;

%mend claiminfo;
```

15

Create Start/End Year Parameters

```
%macro claiminfo(STARTYEAR=, ENDYEAR=);

    title1 "Report for &YEAR";
    proc print data=health.claims_sample;
        var ... ;
        where (SVC_Year eq "&YEAR");
    run; quit;

    title "Summary for &YEAR";
    proc means data=health.claims_sample;
        var ... ;
        where (SVC_Year eq "&YEAR");
    run; quit;

%mend claiminfo;
```

16

Define Scope of YEAR and add %DO

```
%macro claiminfo(STARTYEAR=, ENDYEAR=);
%local YEAR;

%do YEAR = &STARTYEAR %to &ENDYEAR;
    title1 "Report for &YEAR";
    proc print data=health.claims_sample;
        var ... ;
        where (SVC_Year eq "&YEAR");
    run; quit;

    title1 "Summary for &YEAR";
    proc means data=health.claims_sample;
        var ... ;
        where (SVC_Year eq "&YEAR");
    run; quit;
%end;

%mend claiminfo;
```

17

Better Iterative Processing

Single call instead of many:

```
%CLAIMINFO (startyear=2005, endyear=2007);
```

18

Output for Multiple Years

Report for 2005

Obs	ProviderID	MemberID	CHGAMT	LNDISCAMT	EERESP	PaidAmt
9	303-60-2456	012-01-8821	110.00	16.50	93.50	0.00
18	770-03-1665	012-54-4665	11.11	0.00	0.00	11.11

Summary for 2005

The MEANS Procedure

Variable	Label	N	Mean	Std Dev	Minimum	Maximum
CHGAMT	Charged Amount	337	133.8451335	288.5492179	-188.0000000	2451.25

Report for 2006

Obs	ProviderID	MemberID	CHGAMT	LNDISCAMT	EERESP	PaidAmt
8	308-13-7454	011-78-4712	35.00	21.11	13.89	0.00
13	335-82-9189	012-12-1836	12.00	1.80	1.53	8.67

Summary for 2006

The MEANS Procedure

Variable	Label	N	Mean	Std Dev	Minimum	Maximum
CHGAMT	Charged Amount	411	148.3832847	453.4626598	-33.0000000	6385.30

Etc.

19

Conditional Macro Processing

20

%IF-%THEN-%ELSE – General Syntax

```
%if expression %then action;
```

- NOT valid outside of a macro ("open code")
- Note use of % in macro statements
- %THEN required (no subsetting %IF)
- Common use:

```
%macro mymacro;  
  
%if expression %then %do;  
  ...  
%end;  
%else %do;  
  ...  
%end;  
  
%mend mymacro;
```

21

Conditional Macro Processing

Example:

Print the claims report **OR** summary for a given year

22

Start with Macro with a Parameter

```
%macro claiminfo(YEAR=);

title1 "Report for &YEAR";
proc print data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

title1 "Summary for &YEAR";
proc means data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

%mend claiminfo;
```

23

Add a Parameter for Output Type

```
%macro claiminfo(YEAR=, OUTPUT_TYPE=) ;

title1 "Report for &YEAR";
proc print data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

title1 "Summary for &YEAR";
proc means data=health.claims_sample;
  var ... ;
  where (SVC_Year eq "&YEAR");
run; quit;

%mend claiminfo;
```

24

Add Conditional Logic

```
%macro claiminfo(YEAR=, OUTPUT_TYPE=);

%if (&OUTPUT_TYPE eq REPORT) %then %do;
  title1 "Report for &YEAR";
  proc print data=health.claims_sample;
    var ... ;
    where (SVC_Year eq "&YEAR");
  run; quit;
%end;
%else %do;
  title1 "Summary for &YEAR";
  proc means data=health.claims_sample;
    var ... ;
    where (SVC_Year eq "&YEAR");
  run; quit;
%end;

%mend claiminfo;
```

25

%CLAIMINFO (year=2005, output_type=REPORT)

```
MPRINT(CLAIMINFO):   title1 "Report for 2005";
MPRINT(CLAIMINFO):   proc print data=health.claims_sample;
MPRINT(CLAIMINFO):   var ... ;
MPRINT(CLAIMINFO):   where (SVC_Year eq "2005");
MPRINT(CLAIMINFO):   run;

NOTE: There were 337 observations read from the data set
      HEALTH.CLAIMS_SAMPLE.
      WHERE SVC_Year='2005';
```

Report for 2005

Obs	ProviderID	MemberID	CHGAMT	LNDISCAMT	EERESP	PaidAmt
9	303-60-2456	012-01-8821	110.00	16.50	93.50	0.00
18	770-03-1665	012-54-4665	11.11	0.00	0.00	11.11
21	380-04-3952	012-56-7160	95.00	14.25	12.11	68.64
26	325-32-3393	013-64-4285	44.35	4.44	5.99	33.92
29	106-51-3042	020-30-5670	65.00	0.00	0.00	65.00

26

%CLAIMINFO (year=2005)

```

MPRINT(CLAIMINFO) : title1 "Summary for 2005";
MPRINT(CLAIMINFO) : proc means data=health.claims_sample;
MPRINT(CLAIMINFO) : var ... ;
MPRINT(CLAIMINFO) : where (SVC_Year eq "2005");
MPRINT(CLAIMINFO) : run;

```

**NOTE: There were 337 observations read from the data set
 HEALTH.CLAIMS_SAMPLE.
 WHERE SVC_Year='2005';**

Summary for 2005

The MEANS Procedure

Variable	Label	N	Mean	Std Dev	Minimum	Maximum
CHGAMT	Charged Amount	337	133.8451335	288.5492179	-188.0000000	2451.25
LNDISCAMT	Line Item Discount Amount	337	20.0098220	65.4137756	-46.3500000	593.2500000

Resolved Macro Variable in WHERE

41

Interfacing Macro and DATA Step

42

Timing & Resolution of Macro Variables

- Macro Processing > Code Compilation > Code Execution
 - Macro processing happens **before** execution phase
 - DATA step variables available **during** execution phase
 - Cannot use %LET with DATA step variables
- ✗** `%let macro-variable-name=value;`
- Use CALL SYMPUTX instead
- ✓** `call symputx('macro-variable-name', value);`

43

Total Claim Amount Paid for a Patient

```
data _null_;
set health.claims_sample end=eof;
where (SVC_Year eq '2005') and
(MemberID eq '317-62-7676');
TotalPaid + PaidAmt; PaidAmt is a data set variable  
TotalPaid is a computed variable
if (eof) then do;
  put 'In DATA step, ' TotalPaid=;
  %let TOTAL_PAID=TotalPaid;
end;
run;

%put The total paid was &TOTAL_PAID; Quotes not needed
```

788.65

49

Introduction to Macro Quoting

50

Macro Quoting (Masking) Functions

- Needed to eliminate ambiguity
 - Examples: Is OR a mnemonic or a state abbreviation?
Is %Revenue text or a macro invocation?
- Quoting masks mnemonics and special characters
- Mnemonics & special characters treated as text
 - Examples: OR is treated as a state abbreviation
%Revenue treated as text
- Most common functions:
 - %STR and %NRSTR
 - %BQUOTE and %NRBQUOTE
 - %SUPERQ

Hint: Think of "NR" as "Not Resolved"

51

%STR and %NRSTR

- Mnemonics & special characters masked by %STR:

blank)	=	NE
;	(LE
-	+	#	LT
^	—	AND	GE
~	*	OR	GT
"	/	NOT	IN
'	<	EQ	
, (comma)	>		

- Parentheses and quotes must be matched
- %NRSTR masks & and %

52

%STR and %NRSTR

- Use when you can see the characters that need masking – compilation time
- Use % to mask unmatched quotes or parentheses
- Use %NRSTR to prevent resolution of & and %
- Example:

```
%let TITLE=%nrstr(Vince%'s Dog&Pony Show);
```

53

%STR and %NRSTR

<pre>X %let MYSTMT=proc print; run; ;</pre> <pre>✓ %let MYSTMT=%str(proc print; run;);</pre> <pre>X %let MYTEXT=R&D Staff; WARNING: Apparent symbolic reference D not resolved.</pre> <pre>X %let MYTEXT=%str(R&D Staff); WARNING: Apparent symbolic reference D not resolved.</pre> <pre>✓ %let MYTEXT=%nrstr(R&D Staff);</pre>	<p>Terminates %LET; statement is incomplete</p> <p>Interpreted as macro variable D</p> <p>WARNING: Apparent symbolic reference D not resolved.</p> <p>WARNING: Apparent symbolic reference D not resolved.</p>
---	--

54

%BQUOTE and %NBQUOTE

- %BQUOTE masks all the same as %STR:

blank)	=	NE
;	(LE
-	+	#	LT
^	—	AND	GE
~	*	OR	GT
"	/	NOT	IN
'	<	EQ	
, (comma)	>		

- But ... parentheses and quotes can be unmatched
- %NRBQUOTE masks & and %

55

%BQUOTE and %NBQUOTE

- Use when resolved values need masking
- Use %NRBQUOTE to mask & and % at execution time
- Attempt to resolve macro references and masks result
- Masked result does not resolve when used

56

%BQUOTE and %NRBQUOTE

```
%macro claiminfo(YEAR=, OUTPUT_TYPE=);

data _null_;
  * Some other code here;
  title_text = "Vince's Dog & Pony Show";
  call symputx('TITLE', title_text, 'local');
run;

title1 "Report for &YEAR";

%if (&TITLE ne ) %then %do;
  title2 "&TITLE";
%end;

/* Remainder of macro code;

%mend claiminfo;
```

- ✗ %STR
- ✗ %NRSTR
- ✗ %BQUOTE
- ✓ %NRBQUOTE

57

%BQUOTE and %NRBQUOTE

```
%macro claiminfo(YEAR=, OUTPUT_TYPE=);

data _null_;
  * Some other code here;
  title_text = "Vince's Dog & Pony Show";
  call symputx('TITLE', title_text, 'local');
run;

title1 "Report for &YEAR";

%let TITLE=%nrbquote(&TITLE);

%if (&TITLE ne ) %then %do;
  title2 "&TITLE";
%end;

/* Remainder of macro code;

%mend claiminfo;
```

58

%SUPERQ

- Sledge hammer
- Masks everything
- Prevents ALL resolution of macro elements
- Argument is the NAME of an existing variable (no &)
- Not often used because usually need some resolution

59

Previous Code with a Different Title

```
%macro claiminfo(YEAR=, OUTPUT_TYPE=);
  data _null_;
    * Some other code here;
    title_text = "Vince's Dog" || '&Pony Show';
    call symputx('TITLE', title_text, 'local');
  run;

  title1 "Report for &YEAR";

  %let TITLE=%nrbcquote(&TITLE);

  %if (&TITLE ne ) %then %do;
    title2 "&TITLE";
  %end;

  /* Remainder of macro code;

  %mend claiminfo;
```

Vince's Dog&Pony Show

60

%CLAIMINFO (year=2005)

NOTE: DATA statement used (Total process time):
real time 1.22 seconds
cpu time 0.29 seconds

WARNING: Apparent symbolic reference PONY not resolved.

Report for 2005
Vince's Dog&Pony Show

- Appears to have worked
- 1 message instead of 3 ???

61

%let PONY=Cat; %CLAIMINFO (year=2005)

NOTE: DATA statement used (Total process time):
real time 1.22 seconds
cpu time 0.29 seconds

Report for 2005
Vince's DogCat Show

62

Use %SUPERQ Instead of %NRBQUOTE

```
%macro claiminfo(YEAR=, OUTPUT_TYPE=);
  data _null_;
    * Some other code here;
    title_text = "Vince's Dog" || '&Pony Show';
    call symputx('TITLE', title_text, 'local');
  run;

  title1 "Report for &YEAR";

  ✓ %let TITLE=%superq(TITLE);  No & before variable name

  %if (&TITLE ne ) %then %do;
    title2 "&TITLE";
  %end;

  /* Remainder of macro code;

  %mend claiminfo;
```

63

```
%let PONY=Cat; %CLAIMINFO(year=2005)
```

```
NOTE: DATA statement used (Total process time):
      real time           1.22 seconds
      cpu time            0.29 seconds
```

Report for 2005
Vince's Dog&Pony Show

- It really did work
- No warning messages

64

Conclusion

- Macro variables local or global scope
- Timing: Macro processing happens first
- Use macros to replace common/repetitive tasks
- Iterative and conditional processing
- Macro quoting functions mask special characters
- Quoting: test, test, test your code!
